Amendments to the Claims

I claim:

1. (currently amended) A display device for displaying one or more photographs or cards
photograph or card display material of known dimension comprising:
 - a. a sheet having a first side and a second side and pre-determined opposing edges;
 - b. a rectangular photograph or card display material of known dimension between the
opposing edges;
 - [[b]] c. a plurality of opposing large tabs inset from opposing edges of the sheet, and
arranged such that the large tabs are closer together than the photograph or card
display material dimension;
 - [[c]] d. a plurality of small tabs each arranged adjacent to one of the plurality of opposing
large tabs and arranged such that the small tabs are closer together than the
photograph or card display material dimension, wherein the large tabs are arranged to
engage a first photograph or card display material in a curved position on the first
side of the sheet and the small tabs are arranged to simultaneously engage a second
photograph or card display material in a curved position on the the second side of the
sheet[.]; and
 - e. the sheet edges are arranged such that curved edges of the first photograph or card
display material engaged with the sheet is aligned with the sheet edge such that the
sheet and photograph or card display material edges provide a free standing device.
2. (currently amended) The display device of claim 1 further comprising a first and second
split tab, with a first half and a second half, cut into the sheet such that each half of each
split tab bends to the first or second side of the sheet, and each arranged inset from the
opposing edges of the card that are transverse to the edges adjacent to the large tabs and
small tabs, further arranged such that the split tabs are closer together than the first
photograph or card display material dimension and the first half of each split tab arranged
to engage a first photograph or card display material in a curved position on one side of
the sheet and the second half of each split tab arranged to simultaneously engage a
second photograph or card display material in a curved position on the opposite side of
the sheet, the sheet edges are further arranged such that a curved edge of the first

photograph or card display material engaged with the sheet is aligned with the sheet edge such that the sheet and photograph or card display material edges provide a free standing device.

3. (previously presented) The display device of claim 1 further comprising two or more display device edges are connected by perforations.
4. (previously presented) The display device of claim 1 further comprising the display device pre-determined opposing edges are arranged in a shape that relates to the photograph or card displayed.
5. (previously presented) The display device of claim 1 further comprising said tabs are varied in shape.
6. (previously presented) The display device of claim 1 further comprising the sheet incorporates a second layer selected from the group consisting of laminates and tackifiers.
7. (previously presented) The display device of claim 1 further comprising multiple display devices joined by attachments selected from the group consisting of strings and wires.
8. (previously presented) The display device of claim 1 further comprising an extended and decorative border with score lines for pre-determined bends.
9. (previously presented) The display device of claim 1 further comprising a template printout of said display device created by a computer software program.
10. (previously presented) The display device of claim 1 further comprising one or more centrally located marks and or holes for hanging.
11. (currently amended) A versatile display device for one or more ~~photographs or cards~~ photograph or card display material of known dimension comprising:
 - a. a sheet with a first side and a second side and pre-determined opposing edges;
 - b. a rectangular photograph or card display material of known dimension between the opposing edges:
 - [[b]] c. a plurality of opposing split tabs cut into the sheet and arranged such that each half of the split tab bends to the first or second side of the sheet and further arranged such that the split tabs are closer together than the photograph or card display material dimension, and the first half of each split tab arranged to engage a first photograph or

card display material in a curved position on one side of the sheet and the second half of each split tab arranged to simultaneously engage a second photograph or card display material of the same dimension as the first photograph or card display material in a curved position on the opposite side of the sheet and the sheet edges are further arranged such that the curved edges of a first photograph or card display material, and a second photograph or card display material, both engaged with the sheet, is aligned with the sheet edge such that the sheet and photograph or card display material edges provide a free standing device.

12. (currently amended) The versatile display device of claim 11, further comprising two or more display devices are connected such that more than two photograph or card display materials are engaged.
13. (currently amended) The versatile display device of claim 11, further comprising two or more display device edges are connected by perforations.
14. (currently amended) The versatile display device of claim 11, further comprising said display device edge is arranged in a shape that relates to the photograph or card display material engaged with said display device.
15. (previously presented) The versatile display device of claim 11, further comprising said tabs are varied in shape.
16. (previously presented) The versatile display device of claim 11, further comprising the sheet incorporates a second layer selected from the group consisting of laminates and tackifiers.
17. (previously presented) The versatile display device of claim 11, further comprising multiple display devices joined by attachments selected from the group consisting of strings and wires.
18. (currently amended) The versatile display device of claim 11, further ~~further~~ comprising an extended and decorative border with score lines for pre-determined bends.
19. (previously presented) The versatile display device of claim 11, further comprising a template printout of said display device created by a computer software program.
20. (previously presented) The versatile display device of claim 11, further comprising one or more centrally located marks or holes for hanging.

21. (previously presented) The display device of claim 1, further comprising two or more display devices are connected such that a multiplicity of display materials are engaged.
22. (previously presented) The display device of claim 2, further comprising two or more display devices are connected such that a multiplicity of display materials are engaged.
23. (previously presented) The display device of claim 2 further comprising two or more display device edges are connected by perforations.
24. (previously presented) The display device of claim 2 further comprising the display device edge is arranged in a shape that relates to the photograph or card.
25. (previously presented) The display device of claim 2 further comprising said tabs are varied in shape.
26. (previously presented) The display device of claim 2 further comprising the display device incorporates a second layer selected from the group consisting of laminates and tackifiers.
27. (previously presented) The display device of claim 2 further comprising multiple display devices joined by attachments selected from the group consisting of strings and wires.
28. (previously presented) The display device of claim 2 further comprising an extended and decorative border with score lines for pre-determined bends.
29. (previously presented) The display device of claim 2 further comprising a template printout of said display device created by a computer software program.
30. (previously presented) The display device of claim 2 further comprising one or more centrally located marks or holes for hanging.
31. (canceled) ~~A display device for one or more photographs or cards comprising:
a. means for removably engaging display material on a first side and a second side of the display device; and
b. means for displaying engaged display material in a curved position.~~
